

TA: Is grading not just divided over TAs based on the groups they manage?  
with project courses project deadlines coincide with exam week  
next quarter/semester break  
usually each ta grades their own groups / some things may happen so other tas must be  
assigned to grade  
TA's might need to share grading workload but that is in specific cases.  
Might be a could have -> Allow one to many relationship for groups to TAs.

TAs decide with their own discretions problematic students / our approach will be the same  
but less direct

we can use scene builder for the demo in a basic html static version of the site, other options  
include drawing by hand/in sketchbook/mspaint.

by default pipeline gives a template on which we can build upon (Azure repositories have a  
different pipeline)

send project plan to our coach(so that he can approve it)  
send requirements to sander
